

ALMOST ORIGAMI BOX

1. Cut two squares of matching or co-ordinating paper. Cut one square $\frac{1}{4}$ " smaller than the other. The finished box size is approximately one third the size of the paper you begin with. Set the larger square aside.

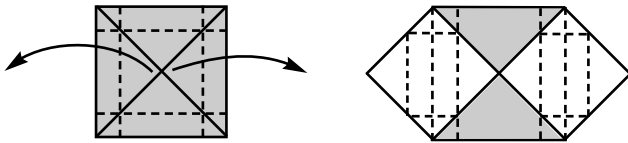

2. Make a light pencil mark on the wrong side of the square indicating the centre. Fold all four corners into the centre.

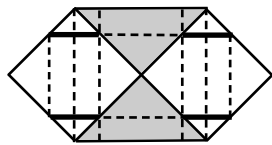

3. Fold all four edges to the centre.

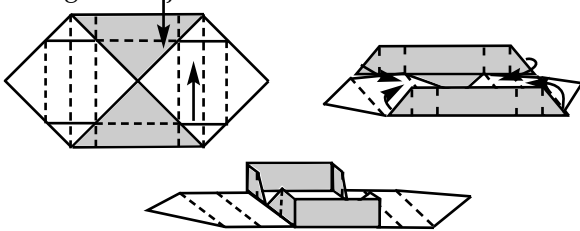

4. Open out the triangle at the right and left sides.

5. Make four cuts where they are indicated in the diagram with a solid line

6. Fold the top and bottom edges along the fold lines. Hold them so that they are perpendicular to the bottom of the box and push in the angled pieces at the ends so that they meet along the adjacent sides.

7. Fold the left and right sides up, over the folded in side flaps and into the centre of the box. You can glue the tips of the triangles down if you wish.

8. Repeat the steps for the second square of paper. It will be just slightly larger as it is the top of the box.
